

1085-019

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re Application of:

Erich Frauendorfer

Group Art Unit: Not yet known

Serial No.: 10/052,228

Examiner: Not yet known

Filed: January 18, 2002

For: **PROCESS FOR THE PRODUCTION OF POLYURETHANES AND/OR POLYUREAS
USING AMINE-N-OXIDE CATALYSTS AND COMPOUNDS CONTAINING AMINE-
N-OXIDES**

Hon. Commissioner of Patents
and Trademarks
Washington, D.C. 20231

New York, NY 10036
April 30, 2002

PRELIMINARY AMENDMENT

Sir:

Before calculation of the claims fee, please amend the above-identified application as follows:

CERTIFICATE OF MAILING BY EXPRESS MAIL

EXPRESS MAIL LABEL NO.: EL 740690308 US

Date of Deposit: April 30, 2002

I hereby certify that this paper or fee is being deposited with the United States Postal Service by "Express Mail Post Office to Addressee" Service under 37 CFR §1.10 on the date indicated above and is addressed to

Box PATENT APPLICATION
Assistant Commissioner of Patents
Washington, D.C. 20231

(Signature of Person Mailing Paper or Fee)

Alan B. Clement, Registration No. 34,563
(Typed or Printed Name of Person Mailing)

IN THE CLAIMS

Please amend Claims 4-11 and 13 in accordance with the provisions of 37 C.F.R. § 1.121(c)(1)(i).

4. (Amended) Process according to Claim 1, characterized by the fact that the amine oxide shows at least one residue linked to the nitrogen atoms with β -hydrogen atom, in particular $-\text{CH}_2-\text{CH}_2-$.

5. (Amended) Process according to Claim 1, characterized by the fact that the amine oxide is selected from the group consisting of triethylamine-N-oxide, N-ethylmorpholine-N-oxide, N-methylmorpholine-N-oxide, diethyloctylamine-N-oxide, dimethylcyclohexylamine-N-oxide, ethyldicyclohexyl-amine-N-oxide, N,N,N',N'-tetra-ethyl-bisaminoethyl ether-di-N,N'-oxide, diethylcyclo-hexylamine-N-oxide and diethylpiperzine-N-oxide.

6. (Amended) Process according to Claim 1, characterized by the fact that the amine oxide is used at 0.01 to 5% by wt., preferentially at 0.05 to 1% by wt., based on the weight of compounds with reactive hydrogen atoms used.

7. (Amended) Process according to Claim 1, characterized by the fact that the compounds containing at least two reactive hydrogen atoms consist mainly of a polyether with at least two free hydroxy groups.

8. (Amended) Process according to Claim 1, characterized by the fact that additionally metal salts of organic compounds can be used as catalysts.

9. (Amended) Process according to Claim 1, characterized by the fact that besides the amine oxides no tertiary amine catalysts are used.

10. (Amended) Process according to Claim 1, characterized by the fact that besides the amine oxides no further polyurethane/polyurea catalysts are used.

11. (Amended) Composition containing the components (A), (B) and (C) according to Claim 1.

13. (Amended) Use of the composition according to claim 11 for production of polyurethane foams, polyurethane adhesives or polyurethane coatings.

REMARKS

Before calculating the claim fee due in this application, please enter the above amendments to remove multiple dependencies. A marked up version of the claims in accordance with 37 C.F.R. 1.121(c)(1)(ii) is attached.

Respectfully submitted,

Alan B. Clement
Registration No. 34,563

37 C.F.R. 1.121(c)(1)(ii) ATTACHMENT

4. (Amended) Process according to [one of the preceding claims] Claim 1, characterized by the fact that the amine oxide shows at least one residue linked to the nitrogen atoms with β -hydrogen atom, in particular $-\text{CH}_2-\text{CH}_2-$.

5. (Amended) Process according to [one of the preceding claims] Claim 1, characterized by the fact that the amine oxide is selected from the group consisting of triethylamine-N-oxide, N-ethylmorpholine-N-oxide, N-methylmorpholine-N-oxide, diethyloctylamine-N-oxide, dimethylcyclohexylamine-N-oxide, ethyldicyclohexyl-amine-N-oxide, N,N,N',N'-tetra-ethyl-bisaminoethyl ether-di-N,N'-oxide, diethylcyclo-hexylamine-N-oxide and diethylpiperzine-N-oxide.

6. (Amended) Process according to [one of the preceding claims] Claim 1, characterized by the fact that the amine oxide is used at 0.01 to 5% by wt., preferentially at 0.05 to 1% by wt., based on the weight of compounds with reactive hydrogen atoms used.

7. (Amended) Process according to [one of the preceding claims] Claim 1, characterized by the fact that the compounds containing at least two reactive hydrogen atoms consist mainly of a polyether with at least two free hydroxy groups.

8. (Amended) Process according to [one of the preceding claims] Claim 1, characterized by the fact that additionally metal salts of organic compounds can be used as catalysts.

9. (Amended) Process according to [one of the preceding claims] Claim 1, characterized by the fact that besides the amine oxides no tertiary amine catalysts are used.

10. (Amended) Process according to [on of the claims 1 to 7] Claim 1, characterized by the fact that besides the amine oxides no further polyurethane/polyurea catalysts are used.

11. (Amended) Composition containing the components (A), (B) and (C) according to [one of the preceding claims] Claim 1.

13. (Amended) Use of the composition according to claim 11 [or 12] for production of polyurethane foams, polyurethane adhesives or polyurethane coatings.
